To provide 5 digital inputs/outputs, the WA3888-V2 devices have a slightly different pinout for the discrete and serial sensors ports than our previous WA3888. The serial pinout has not changed.

In summary:

- In panel connector #2, pin #6 was formerly RS232 RX, but in the V2 device, it is a Serial Digital Interface signal called "SDI-12". Pin #7 was formerly RS232 TX, but in the V2 device, it is a digital signal called "IO_3".
- In panel connector #3, pin #6 was formerly RS232 RX, but in the V2 device, it is a Serial Digital Interface signal called "SDI-12". Pin #7 was formerly RS232 TX, but in the V2 device, it is a digital signal called "IO_4".

To differentiate between the two Intrinsically Safe Wavelets, we have two different part numbers:

- For the classic Wavelet Ex, the part number is **WA3888-xx** (xx represents the different models for US, EU, and SA)
- For the Wavelet Ex-V2 with 5 digital I/Os, the part number is **WA3888-xx-V2** (xx represents the different models for US, EU, and SA).
