ADS Expands 3rd-Party Data Hosting Through ADS PRISM Software

WRITTEN BY ADS ENVIRONMENTAL SERVICES®

Huntsville, AL, December 7, 2021 - ADS Environmental Services® (ADS®) has expanded its 3rd-party data hosting capability through ADS PRISM™ software. Field data generated by Ayyeka's Wavelet™ edge device solutions can now be easily communicated and seamlessly integrated into the ADS PRISM platform from Ayyeka's Field Assets Intelligence™ (FAI™) platform. Users of Ayyeka's Wavelet can also connect directly to the ADS TRITON+ flow monitor and view field data directly in Ayyeka's FAI platform as well as in ADS PRISM.

ADS manufactures the TRITON+® flow monitors, ECHO™ level monitors, and RainAlert® III rainfall monitors, all using PRISM software for data capture, storage, viewing, and analysis.

Ayyeka manufactures the Wavelet, a ruggedized, versatile, and ultra-low-power Industrial Internet of Things (IIoT) edge device. Ayyeka's FAI platform allows field data from virtually any sensor to be managed and analyzed.

Ayyeka's users now have a resource to generate, manage and analyze data in the ADS PRISM software platform. Finally, both ADS and Ayyeka data can be combined into a comprehensive view for an advanced understanding of wastewater and stormwater collection system behaviors.

Contact ADS for more information about wastewater flow monitoring, sewer level monitoring, rainfall monitoring, and advanced flow data visualization and management. Call 800.633.7246 or email adsinfo@idexcorp.com.
